

Blue Cross/Blue Shield of NM Headquarters

Dekker/Perich/Sabatini in collaboration with ZPD+A architects out of Chicago have designed this 115,000sf headquarters building that is focused on the long term needs of the company. With sustainable principles to save energy and the desire to provide highly efficient and healthy work space for the recruitment and retention of its employees, this facility will provide a highly visible corporate identity to Blue Cross Blue Shield in New Mexico. The ground floor of the facility includes a 200 seat food service area and a variety of meeting facilities for training and video conferences. Natural day lighting, the use of non toxic and renewable materials, and the provision of clean air are among the strategies currently being implemented in the design. Flexibility of office layouts, and power and data distribution systems were among the major functional considerations for the facility. With security of staff and information important to BCBS, the facility will have one controlled entrance at the main lobby.

A facility focused on the future, characterized by strong identity, the provision of state of the art work space and support, and sustainable design strategies, this facility is an important role model for new commercial office buildings.

Bradbury Stamm Construction was selected in the early phase of design and worked with the owner and design team from conceptual design all the way to the project's completion.

- High End Finishes
- Security Considerations
- Extensive Curtainwall
- Raised Flooring
- Involved Owner

Location.....Albuquerque, NM
OwnerHealthcare Services Corp.
Architect.....Dekker/Perich/Sabatini
Cost.....\$21.6M
