

Molina Healthcare (Formerly John Hancock Building)

This magnificent four-story headquarters is comprised of two square office towers connected by a curved colonnade. The buildings are constructed of composite floor slab on steel frame and reinforced with three Chevron braces to comply with seismic requirements.

The building includes cable management trays for an array of data wiring, an emergency generator, UPS systems to keep computers on-line in case of a power failure and through-slab floor power to run workstations.

Through a cooperative relationship between Beck Realty Group and Bradbury Stamm, this job was completed within one year.
