

## Zuni High School

The work we did for the Zuni Public Schools was not one project, but a series of repeat projects. Having a repeat client is one of the highest compliments that we receive as a company. This type of successful project is only accomplished in a teamwork environment where the owner, designer, and constructor are all focused the common goals of creating a building on time, within budget, and having the appropriate quality and workmanship.

Our first project is an almost 52,000 square foot classroom addition. It features classrooms, a media center, administrative offices, and commons areas. Some of the specialized classrooms include computer labs, science labs, language labs, and visual art labs.

The second project is an athletic complex nearly 38,000 square feet in size. The complex incorporated design elements to make it a truly "multi-purpose" facility with retractable bleacher seating, classrooms, locker rooms, and a lobby/museum for onsite artifacts.

The third project consisted of the extensive site development for the entire campus. This includes a fire protection loop, water booster stations, domestic water, sanitary sewer system, storm drainage, lighting, landscaping, parking lots and access roads.

**Location**.....Zuni, NM  
**Owner** ..... Zuni Public School District  
**Architect**..... ASA Architect Studio  
**Cost**..... \$11.5M  
**Size** ..... 51,822 sf  
**Completed** ..... February 2003
